Directions for downloading and Installing VMWare and a virtual O/s

1. Insert CD into drive and install VMware, then skip to step 10. If you don't have a CD copies of VMware continue these directions.
2. Go to
3. On the right hand side, under top downloads, click on VMware Workstation.
4. At the next page you will be at the VMware workstation homepage. ON the right side click evaluate.
5. You will now have to register for a 30 day free license key. Click the link for this in the middle of the screen.
6. Fill out the form to complete the registration process, when done click next. Product key will be sent to your email address.
7. Follow the link on the current page to download VMware, read the EULA and then click next.
8. Choose the location where you would like to have the file download to.
9. Once file is downloaded, double click to install it.
10. Follow the installation wizard.
11. When install is complete open up VMware workstation from desktop icon.
12. Select new virtual machine, then typical installation.
13. You will not select your guest OS. (Fedora is on listed select red hat Linux).
14. Click next and enter VM Name and hit next. Use NAT for network type so that you can access the internet from your virtual machine.
15. Accept default disk capacity and install location.
16. Place your OS bootable disk in disk drive and hit start virtual machine. Follow instructions we used in class to install Fedora Core 4.0.
